About me

Dev Academy / Student
March 2023 - July 2023

This was a 16 week hyper immersive Web Development course that mimics how real developer teams interact. They taught me modern stack using technologies such as SQL, React.js, Node.js, TypeScript, HTML5, CSS, JavaScript, SuperAgent, SuperTest. As Well as learning full stack Web development.
Every Friday we worked together in groups of 4-5 people where we brainstormed product ideas and created products using the stack we had learnt thus far.
Dev academy also emphasizes human skills such as non violent communication and some great feedbacking techniques. They also taught me personal techniques that help deal with stress,frustrations and these lead to a better work environment for me and others.

Mathias/About me

I'm a young software developer who would like to make a positive impact on others' lives. My hobbies include video games, going to the gym and I really enjoy spending time with friends and family.
.

Education
